

## MultiAccess III

MultiAccess III has been tested as a personnel access device (PAM) and is therefore a complete access system.

Possibility of use 1: Access in the event of danger, the employee must be brought out of the container quickly and safely. In this case, the victim is first pulled to the manhole by means of a rescue hoist and then pulled out of the container by means of a lowerable anchor point and slide.

Possibility of use 2: Driving

Since MultiAccess III has been tested as a full-face access system, the container can also be accessed from the manhole. This means that work can be carried out inside the container, suspended in the rope.

Complete system MultiAccess III, consisting of:

- Manhole access from the side, consisting of David and chute
- abseiling and rescue device LiftEvac 2K
